Comexi Group reveals the Comexi NEXUS L20000 water-based laminating machine in Labelexpo Europe

The show, held in Brussels, was the stage to introduce the Comexi NEXUS L20000, the laminating machine for flexible packaging applications specially designed to complement the HP Indigo 20000 Digital Press. For the first time, Comexi displayed through daily live demonstrations the wide range of benefits that this innovative solution offers to the market. The visitors highlighted the advantages of using water-based adhesives instead of other technologies such as solvent-based or solventless, and the speed in delivering the product ready for packaging while reducing waste.

Comexi NEXUS L20000: the groundbreaking solution to laminate digitally printed flexible packaging

In Labelexpo Europe 2015, Comexi introduced for the very first time worldwide the NEXUS L20000, the laminating and coating machine specially designed for the HP Indigo 20000 Digital Press. The need to reduce product life cycles and the boom in personalized and mass customized packaging as a marketing tool are two factors that have caused an increase in short term projects demanding a faster delivery time.

Esko partners with press manufacturer Comexi to boost color and digital flexo expertise

Under the partnership, Esko is collaborating with Comexi's Manel Xifra Boada Technological Centre to train and certify Comexi staff to help them transition from a press sale to a solutions sale that provides customers with a broader set of products, services, knowledge, training and support by sharing unique Esko expertise in color, plate making, workflow and more. This will lead to higher customer satisfaction, successful installations, and fast production start-up as request by converters.

In this regard, the Comexi NEXUS L20000 makes it possible to deliver a package in 24 hours, thanks to the swift, intuitive machine set-up, and the fast curing of the water-based adhesives allowing immediate slitting too. This implies a considerable time reduction with respect to conventional solvent-based and solventless technologies that might require several days for final curing.

Flexographic Packaging (US) trusts the versatility of the Comexi NEXUS SL2 solventless laminator

Comexi Group has recently commissioned a Comexi FLEVO F4 printing press at Emirates Printing Forms. This machine represents the first unit in the Middle East, after attaining a leading position in Europe and South America over the last years. The Comexi FLEVO F4 printing press is now fully operational since March 2015, enabling Emirates Printing

Forms to optimise its productive capacity in the shorter jobs.

Comexi, touring Asia

Comexi has participated in up to two events in Asia in recent weeks. The first stop was Mumbai, India, with the holding of the conference 'Speciality Films & Flexible Packaging' in which Comexi was a featured partner. Miquel Salvà, corporate market director, gave a presentation entitled 'The latest on printing and converting in Flexible Packaging' to 800 professionals from 340 companies based in 25 countries. At the same time, our company was present at the IGAS trade show in Japan to promote the Comexi NEXUS L20000 water-based laminator in the Asian industry.

WHO ARE WE?

Comexi Group is a leading company specializing in machinery solutions for the flexible packaging conversion industry.
